TABLE 3 - MISCELLANEOUS DATA

	SUBJECT		
CATEGORY	TO SEPNS	INTERSTATE	STATE
(a)	(b)	(c)	(d)
2000 Lifeline Adjustment	0	700	(700)
2010 Universal Service Fund	0	10,000	(10,000)
2020 Common Line Support-Transitional	N/A	(50,000)	N/A

TABLE 4 - ACCESS LINE DATA

3000	Single Line Residence	500,000
3010	Residence Lifeline	200,000
3020	Residence Non-Lifeline	14,000,000
3030	Multiline Business-Centrex CO & CT	6,000,000
3040	Lines Subject to Special Surcharge	7,000
3050	TOTAL BILLABLE ACCESS LINES	20,707,000

NEW ARMIS REPORT 43-02 STATISTICAL DATA

New ARMIS Report 43-02 contains statistical data relating to access lines, allocations factors, etc. that are used to apportion/allocate costs per Parts 36 and 69 of the Commission's Rules.

TABLE 1 - Universal Service Fund

Provides a summary of USF contributions booked to Account 6540 by fund type (High Cost, Low Income, Schools & Libraries, Rural Health. Also included is a summary of non-USF expenses which are also booked to Account 6540.

TABLE 2 - Separations Allocators

Provides a summary of the major allocators used to separate costs between jurisdictions.

TABLE 3 - Miscellaneous Data

Summarizes Lifeline and USF revenues received during the year.

TABLE 4 - Access Line Data

Displays access lines by Single Line Residence, Residence Lifeline, Residence Non-Lifeline, Multi-line Business, Lines Subject to Special Surcharge and Total Billable Access Lines.

NEW ARMIS REPORT 43-04 COLUMN DEFINITIONS

Column

Definition

- b. <u>Common Line</u> This column reflects the costs of the local loop Pursuant to Part 69 of the Commission's Rules.
- c. <u>Traffic Sensitive</u> This column reflects the amounts that are assigned to the Traffic Sensitive Access elements pursuant to Part 69 of the Commission's Rules.
- d. <u>Trunking</u> This column reflects that portion of each line item applicable to charges assessed upon all interexchange carriers who use switching, transport or special access facilities. The amounts entered in this column are assigned pursuant to Part 69 of the Commission's Rules.
- e. Total Access The total of columns (b), (c) and (d).
- f. Billing & Collection This column reflects that portion of each row applicable to Billing & Collection services pursuant to Part 69 of the Commission's Rules.
- g. <u>Interexchange</u> This column reflects that portion of each row applicable to Interexchange services pursuant to Part 69 of the Commission's Rules.
- h. Interstate The total of columns (e), (f) and (g).

NEW ARMIS REPORT 43-05 COLUMN DEFINITIONS

Table I

Column

Definition

- a. Total Number of Switches This column reflects the total number of switch entities for a particular category. Switching entities include local, class 5 switching machines and any associated remotes.
- b. Number of Switches with Downtime This column represents the number of switches that experience downtime in the current reporting period. In cases of multiple incidents of outage in the same switch, that switch would only be reported once.
- c. Total Switch Downtime Switch downtime occurs when call processing capability for an end office is lost. Downtime is reported in cumulative minutes in this column.
- d. <u>Incidents Under Two Minutes</u> This column represents the number of incidents of switch downtime under two minutes of duration.
- e. <u>Number Unscheduled</u> This amount represents the number of incidents of switch downtime under two minutes in duration that were not scheduled for routine maintenance or network upgrades.
- f. Percent Scheduled This amount represents the percent of downtime incidents under two minutes that are not scheduled for routine maintenance or network upgrades.

NEW ARMIS REPORT 43-06 COLUMN DEFINITIONS

Table I.A.

<u>Column</u> Definition

- a. State or Territory The name of one of the fifty U.S. states or one of the following: District of Columbia, Northern Mariana Islands, Puerto Rico, Virgin Islands, Ocean Cable, or Total.
- b. State or Territory Code The two-letter Postal Abbreviation for the state or territory.

<u>Total Cable</u> - All cables, including wire, coaxial cables and fiber. Include both local loop and interoffice facilities.

- c. Sheath Kilometers of Total Metallic Cable Sheath kilometers of total cable with copper or other metallic conductors.
- d. Sheath Kilometers of Total Fiber Cable Sheath kilometers of total cable with nonmetallic fibers.

<u>Kilometers of Fiber in Cable</u> - Fiber optic cables contain thin filaments of glass or other transparent material enclosed in a protective sheath through which light beams may be transmitted. Include both local loop and interoffice facilities.

- e. <u>Fiber Kilometers Equipped with Electronics (Lit)</u> The number of kilometers of fiber that are equipped by the reporting company with electronics and ready for analog or digital transmission use (not total sheath kilometers).
- f. Total Fiber Kilometers Deployed (Lit and Dark) Total deployed fiber measurement calculated as the sum of the products of the numbers of optical fibers in the sheath for each cable times the associated sheath kilometers. Provide total deployed kilometers, not just the portion in service or equipped with carrier equipment.
- g. <u>Kilometers of Metallic Wire in Cable</u> The sum of the products of the numbers of copper or other metallic wire (pairs multiplied by 2) in each cable times the associated sheath kilometers. The wires must be capable of supporting telecommunications traffic (i.e. not defective). Include both local loop and interoffice facilities.

- h. Equipped Kilometers of Tube in Coaxial Cable The sum of the products of the numbers of tubes equipped with electronics in each cable times the associated coaxial sheath kilometers. Provide only the number of tube kilometers of coaxial equipped with electronics, not total sheath kilometers. Include both local loop and interoffice facilities.
- Equivalent Number of Poles The number of solely owned poles plus the sum of the products of the numbers of jointly owned poles times their ownership percentages. Where the ownership is unknown, assume 50%. Do not include leased poles. Include poles used to support both local loop and interoffice facilities. Round to the nearest whole number.

Conduit System - Pipes in the Conduit Systems account (Account 2441). This includes conduit, whether underground, in tunnels or on bridges (which is reusable in place), through which cables are pulled. Include both local loop and interoffice facilities.

- j. Trench Kilometers Total length of the trenches that contain the ducts.
- k. Duct Kilometers The number of ducts times the trench kilometers.

NEW ARMIS REPORT 43-06 COLUMN DEFINITIONS

Table I.B.

Column Definition

ba. State or Territory - The name of one of the fifty U.S. states or one of the following: District of Columbia, Northern Mariana Islands, Puerto Rico, Virgin Islands, Ocean Cable or Total

bb. State or Territory Code - The two letter Postal Abbreviation for the state or territory.

Radio Relay System - Equipment that is used to transmit and receive radio waves (Above 890 MHz) through space over which communications channels are provided. In columns (bc) through (bg) report the aggregate number of kilometers of system or channel, as appropriate, between the individual stations or radio-relay systems. Include both local loop and interoffice facilities where applicable.

bc. <u>Kilometers of Terrestrial System</u> - Total absolute distance between repeater sites making up microwave radio systems above 890 MHz. Do not include satellite systems in this total.

Kilometers of One-Way Radio Channel - Total kilometers of one-way radio channel above 890 MHz used for message, special services, video or protection. A radio channel consists of a single one-way link using a microwave transmitter and receiver. The radio channel distance is the sum of the lengths of each one-way link associated with a transmitter-receiver pair. Where applicable, multiply the distance by 2 to account for two-way transmission.

- bd. <u>Kilometers of One-Way Terrestrial Radio Channel</u> Total km of one-way radio channel above 890 MHz used in terrestrial radio systems.
- be. Terrestrial Kilometers of One-Way Satellite Radio Channel Total terrestrial kilometers of one-way radio channel above 890 MHz used in satellite radio systems, calculated as the terrestrial distance between the receiver and transmitter terminal locations.

<u>Kilometers of Telephone Channel</u> - Number of equivalent analog or digital telephone circuit kilometers that are equipped and on radio systems above 890 MHz.

bf. Kilometers of Analog Telephone Channel (4 kHz or Equivalent) - Number of 4 kHz or equivalent analog telephone circuit kilometers that are equipped and on radio systems. above 890 MHz. This value is the sum of the products of the number of equivalent analog circuits on each link times the length of the link.

bg. <u>Kilometers of Digital Telephone Channel (64 kbps or Equivalent)</u> - Number of 64 kbps or equivalent digital telephone circuit kilometers that are equipped and on radio systems above 890 MHz. This value is the sum of the products of the number of equivalent digital circuits on each link times the length of the link. In the case of radio systems carrying DS-1 channels for which DS-1 utilization is not known, calculate the sum of the products of the number of DS-1's on each link times the length of the link, round the result to the nearest whole kilometer, and multiply by 24.

Total Equipped Local Loop Circuit Kilometers (Cable and Microwave Systems) - Total equivalent voice-grade or video circuit kilometers in local loop plant. Include both cable and microwave facilities.

- bh. Equipped Local Loop Analog (4 kHz or Equivalent) Circuit Kilometers Includes analog baseband, lightguide (fiber) cables, open wire, paired cable, microwave radio and other analog microwave in local loop plant. Report in equivalent 4kHz circuit kilometers.
- bi. Equipped Local Loop Digital (64 kbps or Equivalent) Circuit Kilometers Includes digital baseband, lightguide (fiber) cables, digital carrier and microwave radio in local loop plant. Report as equivalent 64 kbps circuit kilometers. This may be calculated by summing unrounded DS-1 kilometers, rounding the total to the nearest kilometer, and multiplying the result by 24.
- bj. Equipped Local Loop Video Circuit Kilometers Kilometers of derived video channel in local loop plant.

Total Equipped Interoffice Circuit Kilometers (Cable and Microwave Systems) - Total equivalent voice-grade or video circuit kilometers in interoffice plant. Include both cable and microwave facilities.

- bk. Equipped Interoffice Analog (4 kHz or Equivalent) Circuit Kilometers Includes analog baseband, lightguide (fiber) cables, open wire, paired cable, microwave radio and other analog microwave in interoffice plant. Report in equivalent 4 kHz circuit kilometers.
- bl. Equipped Interoffice Digital (64 kbps or Equivalent) Circuit Kilometers Includes digital baseband, lightguide (fiber) cables, digital carrier and microwave radio in interoffice plant. Report as equivalent 64 kbps circuit kilometers. This may be calculated by summing unrounded DS-1 kilometers, rounding to the nearest kilometer, and multiplying the result by 24.
- bm. Equipped Interoffice Video Circuit Kilometers Kilometers of derived video channel in interoffice plant.

NEW ARMIS REPORT 43-06 COLUMN DEFINITIONS

Table II

<u>Column</u> <u>Definition</u>

- ca State or Territory The name of one of the fifty U.S. states or one of the following:

 District of Columbia, Northern Mariana Islands, Puerto Rico, Virgin Islands or Total.
- cb. State or territory Code The two letter Postal Abbreviation for the state or territory.

Analog Switched Access Lines (4 khz or Equivalent) - Switched network access lines and equivalent 4 khz analog access circuits or trunks. This will include access lines from a digital switch if the lines themselves are not terminated at the customer's premises as a digital line.

- Main Analog Access Lines (4 khz or Equivalent) Total analog switched network access lines excluding PBX Trunks, Centrex-CO lines, and Centrex-CU trunks, Hotel/Motel LD Trunks, and Multi-Line Semi-Public Lines. Provide the number of analog 4kHz or equivalent access lines connecting to single or multiline telephones.
- cd. Analog PBX and Centrex Trunks (4 kHz or Equivalent) Equivalent 4 kHz analog circuits or trunks between the central office and a customer location PBX or Centrex, including Centrex-CU Trunks, PBX Trunks, Hotel/Motel LD Trunks, and Multiline Semi-Public Lines. Service is provided by equipment located on customer-controlled space.
- ce. Analog Centrex Extensions (64 kbps or Equivalent) Equivalent 4 kHz analog circuits connecting a Centrex-CO on telephone company premises to station equipment on the customer's premises. Service is provided by equipment on telephone company owned or leased space.

<u>Digital Switched Access Lines (64 kbps or Equivalent)</u> - Switched network access lines and equivalent 64 kbps (or 56 kbps) digital access circuits or trunks. To be classified as digital, the access lines must be available for use by the customer as digital lines. This will not include access lines from a digital switch if the lines themselves are not terminated at the customer premises as digital lines.

- cf. Main Digital Access Lines (64 kbps or Equivalent) The 64 kbps or 56 kbps or ISDN B channels or other equivalent communication channels of digital subscriber lines as defined above that are circuit switched and can carry either voice or data. Do not include access lines connecting to a customer location PBX or Centrex.
- cg. <u>Digital PBX and Centrex Trunks (64 kbps or Equivalent)</u> The number of 64 kbps or equivalent digital lines terminated on a customer location PBX and/or Centrex. Include Centrex-CU lines

- ch. <u>Digital Centrex Extensions (64 kbps or Equivalent)</u> The number of 64 kbps or equivalent digital circuits connecting a Centrex-CO on telephone company premises to station equipment on the customer's premises, including ISDN based Centrex-CO Lines. Service is provided by equipment on telephone company owned or leased space.
- ci. Other Switched Access Lines Provide in terms of equivalent 4 kHz analog circuits or equivalent 64 kbps digital circuits, the number of other switched access lines not included in columns (cc) through (ch). Use a footnote to itemize separate categories and amounts which are shown here.
- cj. Total Switched Access Lines The sum of columns (cc) through (ci).

<u>Central Office Switches</u> - Assemblies of equipment and software designed to establish connections among lines and between lines and trunks, including access tandems, local, class 5 switching machines, and any associated remote switching machines. There may be more than one switch per central office or wire center.

- ck. Central Office Switches Excluding Remotes The amount in column (cm) minus the amount in column (cl) for each row.
- cl. Remote Switches A switch that has no connection to the facilities network except through its host switch. Include not only those remote switches that are equipped to operate in a stand alone fashion, but also those that are not so equipped.
- cm. Total Central Office Switches The total number of local and tandem switches.

ISDN Control Channels - The packet switched channels on digital subscriber lines (16 kbps for basic rate access or 64 kbps for primary rate access) that carry signaling messages and packet-switched user data.

- cn. <u>Basic Rate ISDN Control Channels</u> The number of basic rate (16 kbps) ISDN control channels. Also include the number of control channels for similar services with a data rate lower than 16 kbps, and indicate the types included in a footnote.
- co. Primary Rate ISDN Control Channels The number of primary rate (64 kbps) ISDN control channels. Also include the number of control channels for similar services with a data rate higher than 16 kbps, and indicate the types included in a footnote.

SUMMARY

Section 11 of the Telecommunications Act of 1996 ("1996 Act") contains an unambiguous mandate to the Commission to review and eliminate needless regulation. No area of regulation is more ripe for streamlining than the Commission's accounting and cost allocation rules. The accounting and cost allocation rules were instituted in an era when a carrier's cost also determined its prices. That, however, is no longer the case for large LECs. Price cap regulation has replaced cost based regulation, thereby breaking the link between a company's cost and its prices. Accordingly, many of the rules and regulations that were established to protect consumers under cost based regulation are simply no longer needed.

The Commission should take the opportunity of this Section 11 review to get rid of the many accounting and cost allocation rules that are unnecessary in the light of price cap regulation. The Commission had thoughtful input from the industry prior to issuing the Notice. The Commission, however, proposes to do very little to rid the industry of needless vestiges of cost based regulation, and instead proposes only to reduce some regulation for mid-sized LECs, many of which remain under cost based regulation. This is both ironic and illogical. There is simply no need for extensive accounting and cost allocation regulation of the price cap LECs.

BellSouth does not oppose the changes proposed in the Notice. Indeed. BellSouth contends that any reduction in regulation is good for the industry because it moves the entire industry closer to where it should be – full competition without government interference. The proposals in the Notice, however, should be extended to all LECs. Retaining costly and time consuming regulation of only one class of carrier distorts the competitive marketplace.

Section 11 requires the Commission to eliminate marketplace distortions to the fullest extent

possible consistent with the public interest. The Commission should not stop with the changes proposed in the Notice, but should go further and eliminate other rules that are no longer in the public interest. BellSouth proposes many such changes in its Comments. Arthur Andersen has also filed with the Commission an extensive "white paper" analyzing Part 32 of the Rules and proposing changes that would streamline those Rules. BellSouth endorses the analysis and proposal of Arthur Andersen. BellSouth also endorses the changes proposed in the Comments of the United States Telephone Association.

COMMENTS OF BELLSOUTH

BellSouth Corporation and BellSouth Telecommunications Inc., ("BellSouth") hereby comment on the issues raised in the Notice of Proposed Rulemaking ("Notice"), FCC 98-108, released June 17, 1998, in the captioned proceeding. For ease of reference, BellSouth has followed the order of presentation of the issues set forth in the Notice.

I. INTRODUCTION

This proceeding was initiated to comply with the requirement in Section 11 of the Telecommunications Act of 1996 (the 1996 Act):

Section 11. Regulatory Reform.

- (a) BIENNIAL REVIEW OF REGULATIONS.--In every even-numbered year (beginning with 1998), the Commission--
- (1) shall review <u>all regulations</u> issued under this chapter in effect at the time of the review that apply to the operations or activities of any provider of telecommunications service; and
- (2) shall determine whether such regulation is no longer necessary in the public interest as the result of meaningful economic competition between providers of such service.
- (b) EFFECT OF DETERMINATION.--The Commission shall repeal or modify any regulation it determines to be no longer necessary in the public interest.¹

¹ 47 U.S.C. § 161 (emphasis added).
